## SUMMARY

---

Mobile engineer with 4+ years shipping React Native and native iOS to production, from 0-to-1 App Store launches to applications serving 400K+ users. Currently building Club's native iOS rewrite in Swift and SwiftUI after root-causing the React Native memory ceiling behind its feed performance.

## EXPERIENCE

---

### Club | [App Store](#)

May 2026 – Present

*Senior Mobile Software Engineer · Second engineer on the mobile team*

- Took Club's React Native app from a bare shell to public iOS and Android launch in **three months** as the second of two mobile engineers, shipping through a multi-week beta to **30K+ new users** on a platform with 100K+ existing members, at a **4.8 App Store rating**.
- Root-caused the app's feed performance ceiling to React Native memory pressure — **800MB at cold launch climbing to 2-3GB under sustained scrolling** — after RN-side mitigations including FlashList virtualization produced negligible gain; integrated Sentry to quantify the resulting OOM crashes and App Hang events and establish the case for native migration.
- Built a **feature-complete native iOS rewrite in Swift and SwiftUI** on an MVVM architecture, now in release preparation — the native feed holds **under 200MB after five minutes of continuous scrolling**, with native iPad support, home screen widgets, and system share integration.
- Designed the iOS subscription catalog for Patreon-style creator-set pricing against Apple's one-active-subscription-per-group constraint, deriving price tiers from production data and provisioning **88 products** as slot-per-concurrent-subscription groups.
- Automated end-to-end **App Store Connect catalog creation and review submission** with a Python tool authenticating via ASC API signing keys, replacing 88 hand-configured products with a reproducible pipeline; built the expo-iap client layer for subscriptions and 5 Club Cash consumable tiers with full purchase state handling and backend entitlement handoff.
- Built the complete mobile implementation of **Communities**, Club's Reddit-style creator community system, as sole owner on mobile — creation, discovery, membership, feeds, media post composition, comments, reactions, moderation, roles and permissions, and activity notifications.
- Extended CometChat messaging with typing indicators, custom emote reactions, media messaging, and subscription-gated permissions, plus end-to-end push notifications via APNs/FCM with **deep linking, unread badging, and delivery across foreground, background, and killed states**.

### NTT Data Inc.

June 2025 – May 2026

*Senior Software Engineer, Enterprise Integrations*

- Architected a headless UI automation framework in JavaScript and Playwright for end-to-end testing of enterprise web applications.
- Engineered an Amazon RDS-to-Salesforce data pipeline processing thousands of records per nightly run through custom Apex batch classes for insert, update, and delete operations, with metadata and Apex deployments automated through Gearset and GitHub Actions.
- Mentored **5 junior developers** through onboarding, code review, and technical documentation, establishing development standards across the team.

### Sunnova Energy Corporation | [App Store](#)

Apr 2022 – May 2025

*Software Engineer II, Full Stack (Oct 2023 – May 2025) · Software Engineer, Full Stack (Apr 2022 – Oct 2023)*

#### Mobile — React Native

- Led design and delivery of a push notification system, from OneSignal vendor evaluation and architecture proposals through stakeholder presentations to production deployment, processing **55K+ monthly notifications**.
- Optimized mobile performance through offline-first architecture and caching, **reducing API calls by 43%** for applications serving **400K+ users**.
- Co-led Chase Merchant Services payment integrations including Apple Pay and Google Pay, supporting **\$250K+ in monthly transactions**.

- Improved mobile release pipelines with GitHub Actions and Expo EAS, automating branch-based triggers across development, staging, and production with distribution to TestFlight and Google Play.
- Overhauled JWT authentication across web and mobile — token expiration, role-based access control, claim-based endpoint validation, and secure device token storage — and built RESTful endpoints powering consumer-facing features at **1M+ daily requests and 99.9% uptime**.

#### Web, Backend & Infrastructure

- Contributed to an Angular/Salesforce dealer platform rewrite in Next.js and .NET, **reducing API response times from 15–20 seconds to under 2 seconds** through server-side pagination and query optimization, and built reusable Storybook components and .NET endpoints for the platform.
- Designed and maintained AWS infrastructure with Terraform and CloudFormation, provisioning Lambda, API Gateway, RDS, VPC, and S3 for production applications serving 400K+ users.

#### Potato TV

Jan 2022 – Apr 2022

Software Engineer, iOS — Internship

- Built a native share modal in Swift and SwiftUI for sharing content links to external applications, and resolved production crashes caused by deprecated APIs and breaking changes across Xcode and SwiftUI upgrades.

#### TECHNICAL SKILLS

---

**Mobile:** React Native, Expo / EAS, TypeScript, JavaScript, Swift, SwiftUI, UIKit, MVVM, WidgetKit, Redux, React Navigation, FlashList, SQLite, Xcode, Android Studio

**Payments & Messaging:** StoreKit, App Store Connect API, Google Play Billing, expo-iap, Apple Pay, Google Pay, CometChat, OneSignal, APNs / FCM

**Backend & Web:** React, Next.js, Node.js, Python, FastAPI, .NET, C#, PostgreSQL, Salesforce / Apex

**Testing & Observability:** Jest, Pytest, Playwright, Sentry, New Relic

**CI/CD & Cloud:** GitHub Actions, AWS (Lambda, API Gateway, RDS, VPC, S3), Terraform, CloudFormation, Docker

#### EDUCATION

---

##### CUNY Hunter College

Aug 2017 – May 2021

Bachelor's, Computer Science — Mathematics Minor • Dean's List, Cum Laude Honors
